The University of Hong Kong

Python

Python

- In this course, we will use **Python** for textual analysis.

- In this course, we will use **Python** for textual analysis.

- Why?

- In this course, we will use **Python** for textual analysis.

- Why?
  - Python has rich libraries for textual analysis.

- In this course, we will use **Python** for textual analysis.

- Why?
    - Python has rich libraries for textual analysis.
    - Python has clear syntax.

- In this course, we will use **Python** for textual analysis.

- Why?
    - Python has rich libraries for textual analysis.
    - Python has clear syntax.
    - AI agents are good at Python.

Installation

- The best way to install Python is **NOT** to install Python.

- The best way to install Python is **NOT** to install Python.

- The standard way to install Python is through `conda`, an open-source package and environment manager.

Installation

- The best way to install Python is **NOT** to install Python.

- The standard way to install Python is through conda, an open-source package and environment manager.
  - I recommend conda-forge, a community-led channel. See https://conda-forge.org/.
